

OLLARI E CONTI

MOD. L.B.800/3/4

AUTOMATIC LINE MOD. L.B.800/3/4

Suitable for cleaning beef rounds (small intestines). Made of AISI 304 stainless steel. This line is composed of tanks and various machines for separating and collecting rounds for each different phase of processing. The rounds move through the line automatically. The rounds are collected on the front receiving tray where they are placed on a moving chain conveyer. The rounds pass through the first machine, which strips the manure and defats the rounds and then fall onto the next moving conveyer. Here, the rounds are dragged through hot water and are conveyed into the second and/or third stripping and defating machines. The mucosa is collected in troughs and directed to the side of the machine for easy disposal. After this process, the rounds are collected in a turning tank where the worker will manually invert the rounds inside out. The operator then feeds the rounds into the last machine for the internal de-sliming phase. The machine is supplied with an electric control panel with a stainless steel cabinet, overloads and low tension 24 V control push-buttons.

Capacity/h			
Rounds (Intestines)		CE	
LB800/3	100 max.		
LB800/4	100 max		
Technical features		CE	
Installed power V 400		Water consumption/h 45°	
LB800/3	Kw 4.5	LB800/3	2.4m ³ -45°
LB800/4	Kw 6	LB800/4	3.2m ³ -45
